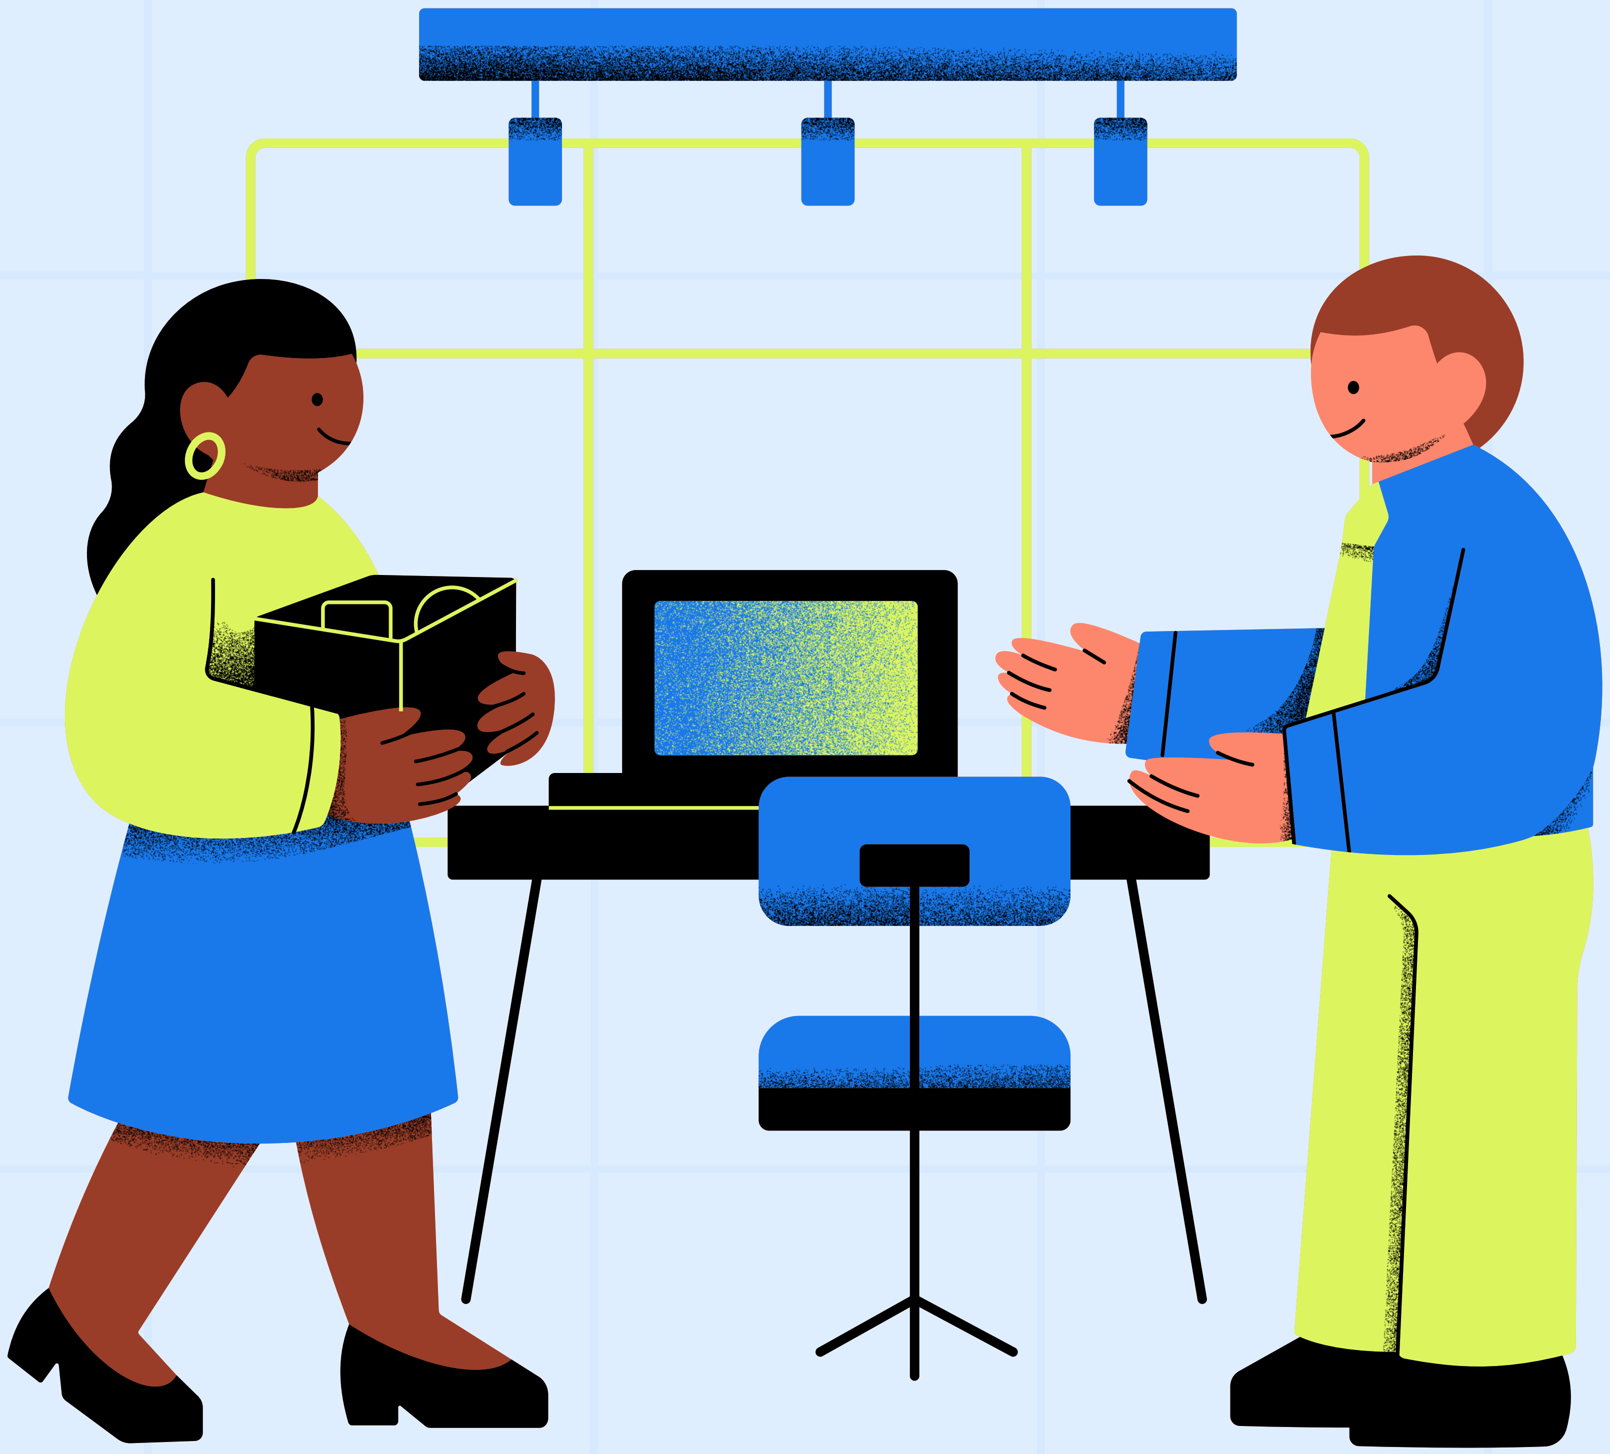
PROJECT PRESENTATION

Presentation By Soumik Adak

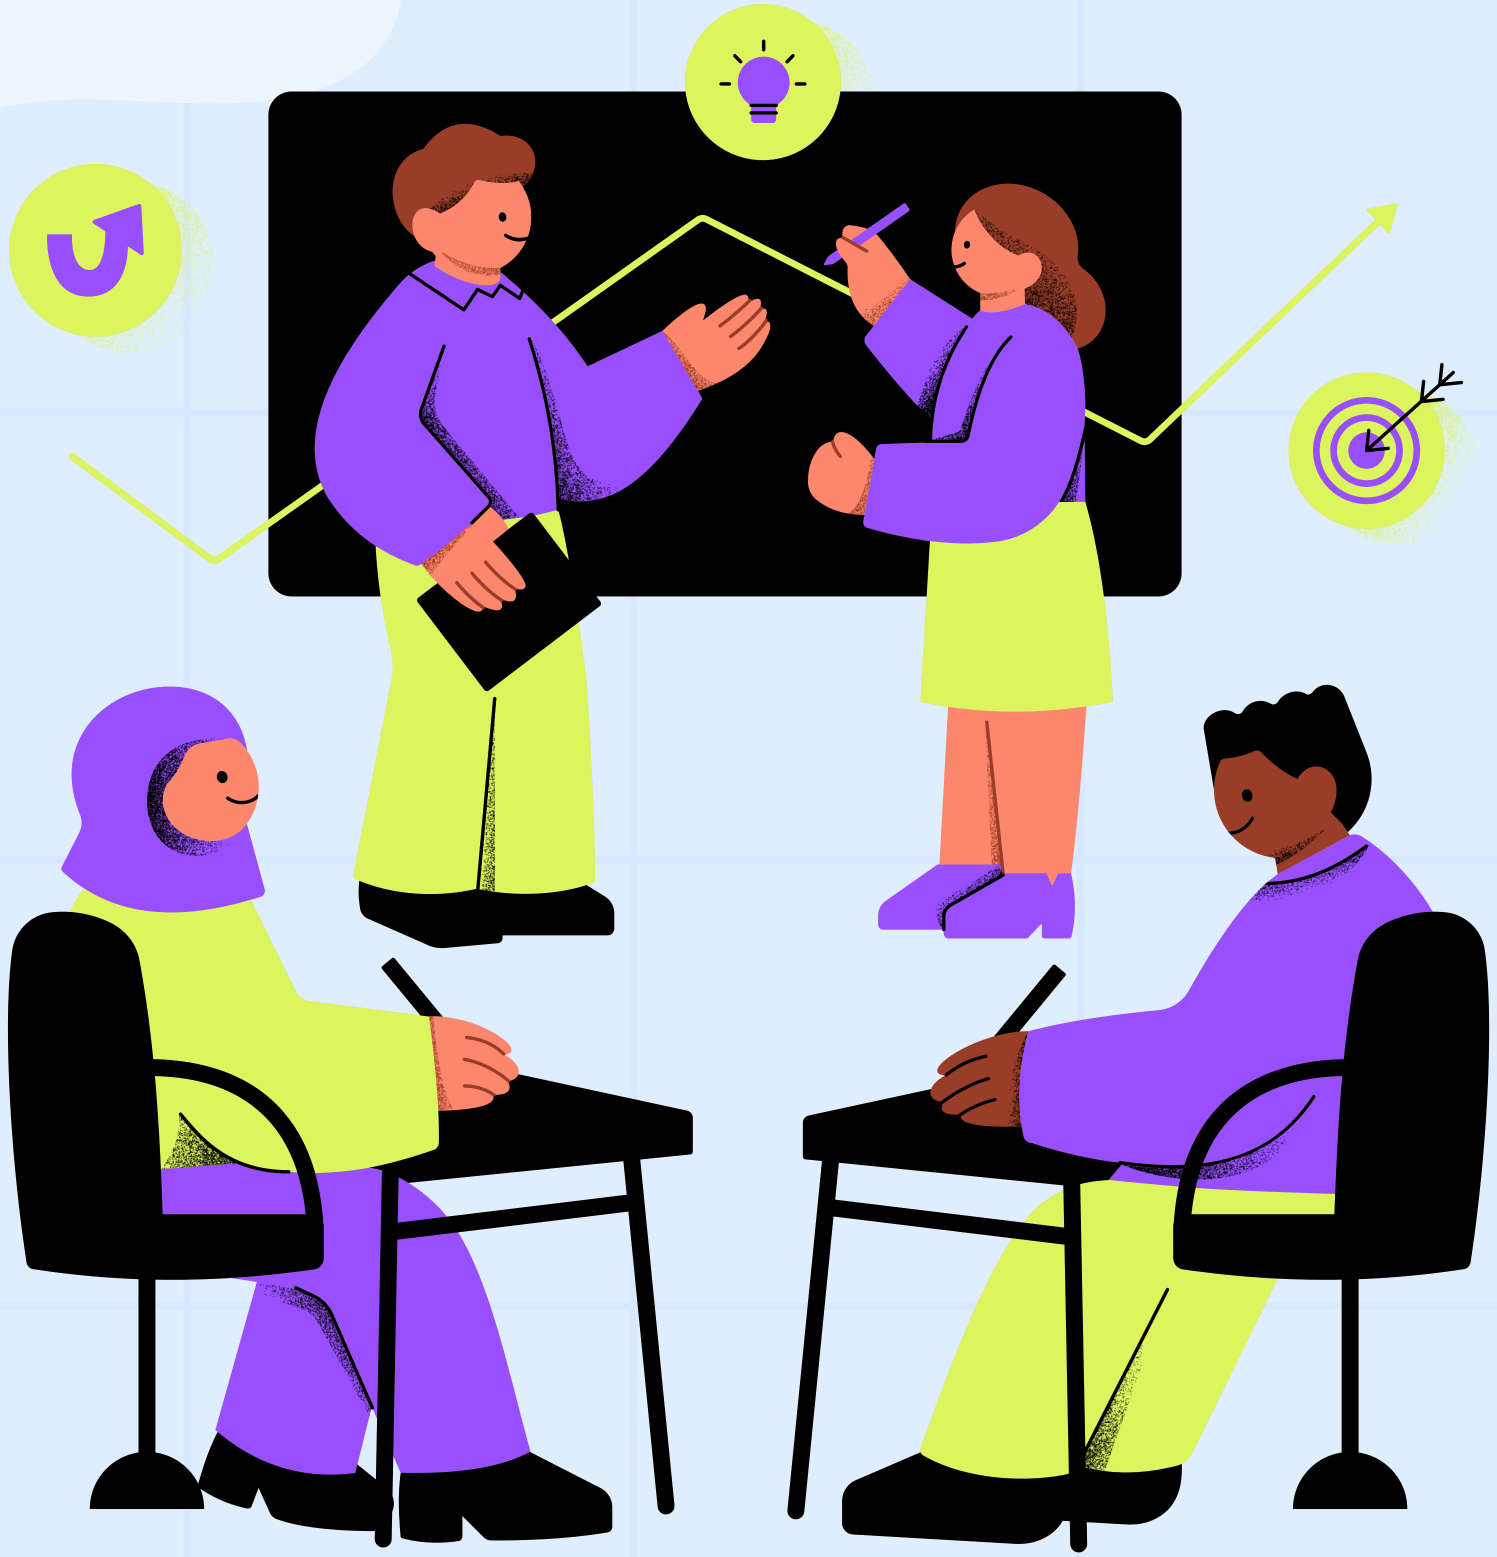


PROJECT OVERVIEW

•Churn is a critical challenge for subscription businesses.
•Objective: Reduce churn through data-driven insights
•Dataset: 500+ customer records

BUSINESS PROBLEM

•High churn leads to revenue loss and higher acquisition costs.
•Key question: Why are customers leaving, and how can we retain them?



PROJECT OBJECTIVES

- Identify churn drivers
- Build predictive models
- Segment customers by risk
- Recommend actionable strategies

DATASET OVERVIEW

•Attributes: Tenure, Monthly Charges, Contract, Payment Method, Senior Citizen, Churn
•Dataset size: 500+ rows

PROJECT TIMELINE

A Project Timeline is a schedule or time frame that shows the sequence of activities and time limits for each stage in a project. This includes estimating the time to start and complete each task, as well as determining dependencies between activities. The following is a simple example of a software application creation project timeline:

Planning

Data Preparation

EDA

Advanced Analysis

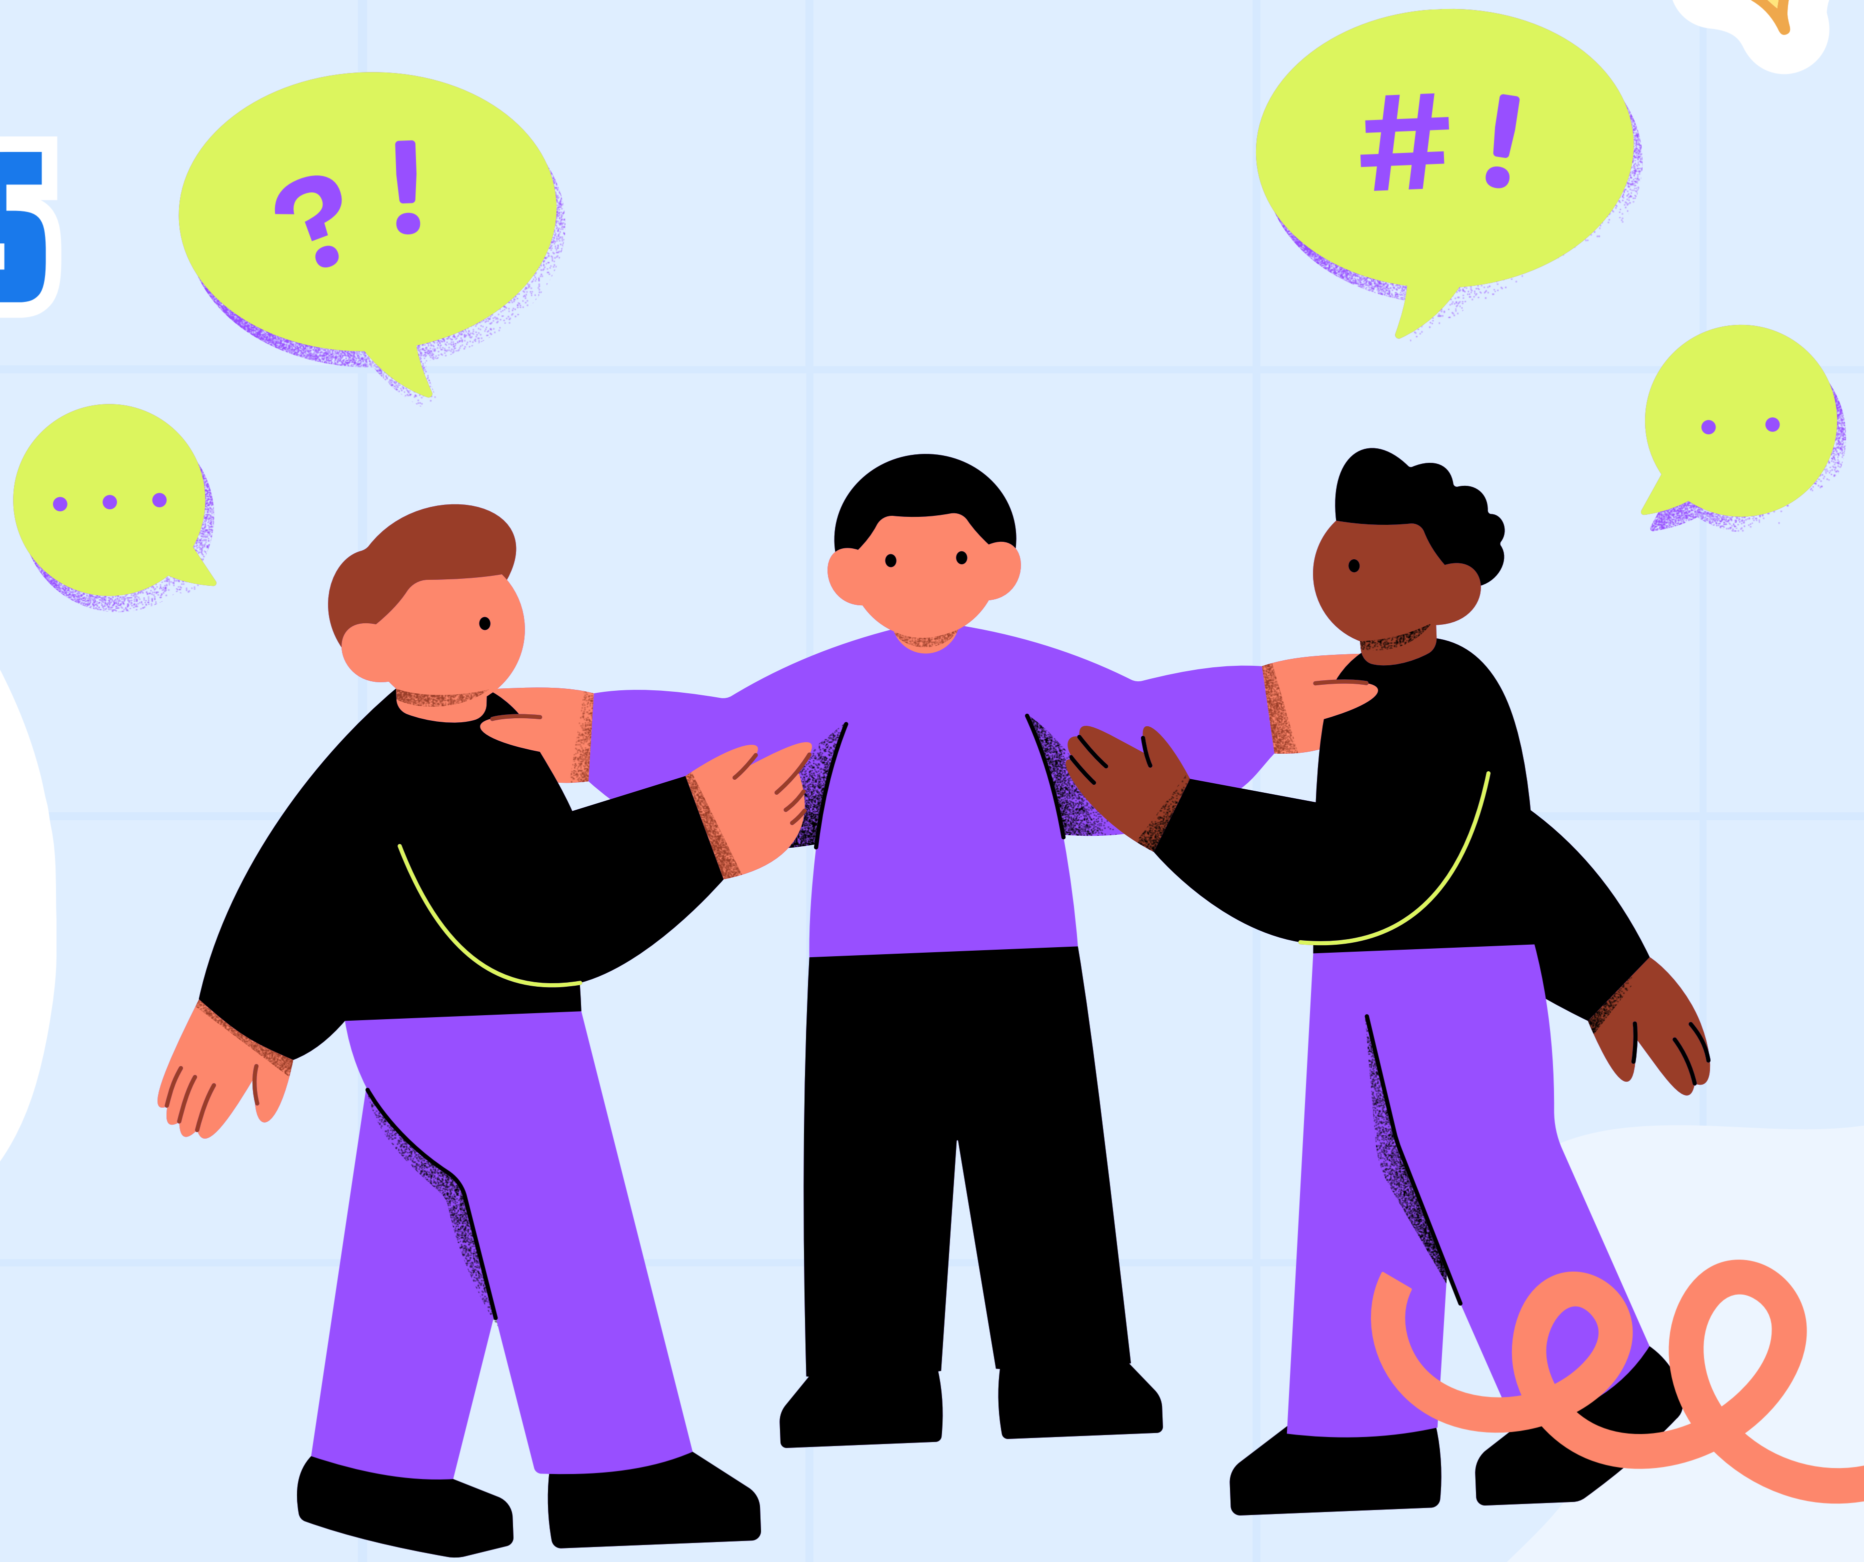
Insights

INSIGHTS

- Month-to-month contracts and electronic check payments have the highest churn
- Senior citizens churn more frequently
- High monthly charges increase churn risk

RECOMMENDATIONS

- Incentivise long-term contracts
- Promote auto-pay or digital wallets
- Provide tailored support for senior citizens
- Offer loyalty discounts for high-charge customers



BUSINESS IMPACT

- Expected churn reduction: 10–15%
- Revenue retention leads to significant annual savings

CONCLUSION

This project demonstrates how data-driven analysis can effectively address customer churn. By cleaning and preparing a dataset, conducting exploratory analysis, and applying predictive modelling, clustering, and survival-style techniques, we uncovered clear churn drivers. Month-to-month contracts, electronic check payments, and high monthly charges emerged as the strongest predictors, while tenure stabilized loyalty. Logistic regression achieved strong predictive accuracy, enabling proactive identification of at-risk customers.
